DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/05/06 and 11/03/06 have been entered.

Response to Amendment

2. The amendments, filed on 10/05/06 and 11/03/06, have been entered and made of record. The Applicants have canceled claims 10-13.

Election/Restrictions

3. Claims 4-9 are allowable. The restriction requirement species, as set forth in the Office action mailed on 05/13/05, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.**

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the

claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

4. Claims 1-9 and 14-19 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1 the prior art of record neither anticipates nor renders obvious, "a data acquisition apparatus for scanning a surface to record digital images thereof and to record data for determining three-dimensional coordinates thereof, said apparatus comprising:

at least one camera for recording said digital images of said surface, said camera having an optical axis;

at least two lasers for marking points in said digital images for determining said three dimensional coordinates of said surface, said lasers having optical axes, said optical axes of said camera and said lasers being essentially parallel;

an essentially horizontal rail for mounting said camera and said lasers, **said camera being mounted between said lasers**, and said rail having means for horizontally shifting said camera and said lasers along said rail, **the positions of said lasers being adjustable relative to the camera, via said means for horizontally shifting said camera and said lasers, depending on the scale of the surface to be recorded;**

at least one essentially vertical post attached to said rail by means for rotating and horizontally shifting said rail, said post having means for vertically shifting said rail;

at least one moveable platform for mounting said posts and for positioning said camera and said lasers proximate to said surface; and, data acquisition equipment for adjusting said platforms, said posts, said rail, said camera, and said lasers; for recording position data for said platforms, said posts, said rail, said camera, and said lasers; and, for recording said digital images."

Regarding claim 4 the prior art of record neither anticipates nor renders obvious, "a data acquisition system for generating a three-dimensional data model of a surface, said system comprising:

a data acquisition apparatus for scanning said surface to record digital images thereof and to record data for determining three-dimensional coordinates thereof, said data acquisition apparatus comprising:

at least one camera for recording said digital images of said surface, said camera having an optical axis;

at least two lasers for marking points in said digital images for determining said three-dimensional coordinates of said surface, said lasers having optical axes, said optical axes of said camera and said lasers being essentially parallel;

an essentially horizontal rail for mounting said camera and said lasers, **said camera being mounted between said lasers**, and said rail having means for horizontally shifting said camera and said lasers along said rail, **the positions of said lasers being adjustable relative**

to the camera, via said means for horizontally shifting said camera and said lasers, depending on the scale of the surface to be recorded;

at least one essentially vertical post attached to said rail by means for rotating and horizontally shifting said rail, said post having means for vertically shifting said rail;

at least one moveable platform for mounting said posts and for positioning said camera and said lasers proximate to said surface; and,

data acquisition equipment for adjusting said platforms, said posts, said rail, said camera, and said lasers; for recording position data for said platforms, said posts, said rail, said camera, and said lasers; and, for recording said digital images; and,

a data acquisition computer system in communication with said data acquisition apparatus, said data acquisition computer system comprising:

means for adjusting said data acquisition apparatus in accordance with user instructions;

means for receiving said position data and said digital images from said data acquisition apparatus;

means for determining three-dimensional coordinates of said surface from said position data and said digital images;

means for associating said digital images with said three-dimensional coordinates to produce said three-dimensional data model;

memory for storing said position data, said digital images, said three-dimensional coordinates, and said three-dimensional data model;

a display for presenting said three-dimensional data model to said user; and,

Art Unit: 2622

an input device for accepting user instructions from said user for adjusting said data acquisition apparatus.”

Regarding claims 2-3,14-19 and 5-9, the claims are allowed as being dependent of claim 1 and 4, respectively.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
